**New  
Kits**

For Release –  
NASG National Convention  
July 2010

### **BACK ALLEY Series of Kits returns**

Pine Canyon Scale Models is pleased to announce the re-launch of our Back Alley series of kits, with new options for modelers.

Available now are these first four kits in the series:

- #403S – Back Alley 2 (Full Kit)
- #404S – Ultra Low Relief Back Alley 2
- #401S – Short Back Alley 2 (1 Building with 1 Dock)
- #402S – Short Back Alley 2 (2 Buildings with 2 Docks)

The Back Alley series is designed to support the compression of real life scenes that is often required on a model railroad layout. Many layouts do not have the space available or the need to include full size structures, especially when it comes to large structures. In the Back Alley series, low relief is used to allow the inclusion of those structure aspects that relate to railroad activity or are of importance to the scene being modeled. Back Alley series kits will build a structure that is three sided (one side to a wall or make your own rear wall).

The Back Alley series is being fully re-designed to provide a variety of options to modelers. In addition to the flexible configuration that was available in the kits previously, the new Back Alley series kits will now also be available in a variety of sizes, enabling modelers to use a kit appropriate to the space available and needs of the layout scene. And by introducing different sizes of the Back Alley kits, Pine Canyon is also able to offer these kits at a variety of price points.

#### **Kit #403S – Back Alley 2 (Full Kit) (MSRP \$125)**

The photograph shows one configuration of the full Back Alley kit (#403S). Back Alley 2 is a reversible modular kit that can be arranged in a variety of ways for a factory or warehouse wall totaling over 29". Designed for the space between the backdrop and back track or another location the modeler might prefer, the kit needs a maximum 3" depth or 4½" if the included loading docks are used.

The kit can be used as a false back either by assembling without the side walls or by flipping the side walls out to create a longer facade.

(over)

Cast in high quality polyurethane resin, the kit also includes separate plastic windows, styrene components, and numerous cast resin details such as roof turbines, roof vents, drain collection boxes, barrels, electric meters, loading docks, trash barrels, and more. Other photographs in this release show other possible variations of the Back Alley 2 full kit.

### **Kit #401S – Short Back Alley 2 (1 Building with 1 Dock) (MSRP \$59)**

This new kit offers the modeler a smaller structure – the kit builds the portion highlighted in the orange box on the adjacent photo. Requiring only 9¾" x 3" (4½" with the loading dock), this kit includes just one building with side walls and one loading dock plus separate plastic windows and numerous detail parts.

### **Kit #402S – Short Back Alley 2 (2 Buildings with 2 Docks) (MSRP \$79)**

This kit builds a structure with two of the buildings from the full kit. It is 18½" long, and can be built as shown or reversed. Two building panels and side walls, two loading docks and roof parts are included along with separate plastic windows and a variety of detail parts.

### **Kit #404S – Ultra Low Relief Back Alley 2 (MSRP \$99)**

For those scenes where either a full depth Back Alley 2 won't fit or it is not required, Pine Canyon offers Kit #404S – it's the full Back Alley 2 kit without the side walls, roof parts and roof details. Requiring a depth of only 1", or 2½" with the included loading docks, the kit also includes separate plastic windows and the details as shown.

**Limited Time Bonus:** As a limited time added bonus, in kit #404S, we have included the roof parts and some additional roof details in the event modelers want to use this kit as an extension kit to one of our other Back Alley 2 series kits.
